

Jack Xu Mist Nets

Specially Designed for Bird Ringing

Top quality with much lower price

Catalogue valid from January 2011

Jack Xu Mist Nets

ADVANTAGES:

- The quality and efficiency of our nets are result from more than 20 years of experience.
- All our nets are made from the highest quality nylon and polyester netting.
- All our nets are black, except the Beige nylon nets, UV protected; the material and colours are durable and longlasting.
- The special knots used in our nets help to prevent the loops and shelf strings from moving.
- The construction with positioning strings prevent wind shift of the netting.
- All our nets are well tethered.

LOOPS:

- Top loops are colour-coded to make fast setting easier.
- New loops are designed to be used especially with Mist Net Poles.

MAIN FEATURES:

- Net dimensions: length without loops and stretched to a standard tension, height and number of shelves are shown in the table.
- The thickness, visibility and strength of the nets is indicated by the denier (a unit of weight for fibres) and the number of fibres used in the netting. So 90denier/2-ply netting is lighter and thinner than 110d/2-ply netting, and 210d/3-ply is thinner than 600d/3-ply netting.
- Mesh size is measured by one side of the squared mesh - "16 mm" refers to a "16x16 mm mesh".
- Nets of up to three shelves are tethered on a single shelf strand to prevent windbunching the netting. Nets with four or five shelves feature three tethered strands.

HOW TO CHOOSE MIST NETS

First consider:

- what animals you intend to catch; bats or birds:

Sample groups used in the tables

A - small passerines

B - medium passerines

C - waders, small ducks, small & medium terns

D - small owls & raptors, medium & big waders

E - owls, medium raptors, medium & big ducks

big raptors, geese, cormorants

- size, strength and behaviour of the animals you are targeting;
- features of the habitat where you plan to use the nets:
 - open or dense vegetation,
 - height of vegetation,
 - light conditions.
- Then select the features of the net:
 - most effective type of material and the thickness of the yarn;
 - size of the mesh;
 - number of shelves and height of the net;
 - length of the net.

Jack Xu Mist Nets

TO PREVENT ILLEGAL HUNTING:

With Jack Xu Mist Nets, we require our customers to send a copy of their ringing licence or a recommendation from a scientific institution before we process orders

ORDERS:

- Visit our e-shop (has not finished yet) or order e-mail to us (jackxumistnets@hotmail.com) with the catalogue code and quantities of the items you need.
- Please do not make any prepayment before getting our pro forma invoice.
- Prices do not include VAT or any taxes due in your country.
- We accept payment by bank transfer. As for small orders, paypal payment is ok.
- We usually send goods abroad by FedEx or Hongkong Air Mail parcel , which costs about \$25 for parcels up to 1kg.

Specially Designed for Bird Ringing

Series 900P (90d/2-ply polyester) These nets are recommended for catching small birds and bats. They are barely visible and can be used in any habitat, including open areas. The polyester fibre is UV resistant and does not absorb moisture. In the morning or after rain just shake the net to remove droplets.

Material	Code	Mesh (mm)	Height (m)	Length (m)	Shelves	Price(\$)	Used for

916/25-1P	25	35.7					

Series 110(110d/2-ply nylon) These nets are strong and durable, but still thin and very effective. They remain as strong and as black as new after 500 days of continuous exposure in the field. These nets are ideal for long-term work, are very safe for birds and are easy to use. They are suitable for catching small and medium-sized birds. This series can be used in any habitat, but we recommend that they be set in front of trees or bushes to decrease visibility and to increase their effectiveness.
