

## THIRTEENTH RINGING REPORT

G. R. MCLACHLAN  
(Hon. Ringing Organiser)

*Received April 1969*

This report covers the period 1 July 1962 to 30 June 1963. Once again the number of birds ringed was slightly higher than during the previous year.

Recoveries of particular interest include a Yellow-billed Duck, ringed at Barberspan and recovered at Milnerton in the Cape. Hitherto, recoveries of this species had always been within 400 miles of the place of ringing. A juvenile Cattle Egret ringed at Geduld turned up in Teso, Uganda. For the first time, the Red-knobbed Coot emerges as a long-distance migrant, Barberspan birds being recovered at Windhoek in South West Africa and at Elandslaagte in Natal. Another important recovery is that of a Larger Striped Swallow, ringed at Somerset West and recovered at Vudi in the Congo, where a Cliff Swallow was also found, ringed originally near Johannesburg.

Once again financial support was received from the S.A. Council for Scientific and Industrial Research which enabled the scheme to continue functioning and we are also deeply indebted to the National Zoological Gardens for all the work involved in forwarding recoveries to the Society.
